## Decision Table-Based Testing

## Chapter 7

## Decision Tables - Wikipedia

- A precise yet compact way to model complicated logic
- Associate conditions with actions to perform
- Can associate many independent conditions with several actions in an elegant way

## Decision Table Terminology

| Stub | Rule 1 | Rule 2 | Rules <br> 3,4 | Rule 5 | Rule 6 | Rules <br> 7,8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| c1 | T | T | T | F | F | F |
| c 2 | T | T | F | T | T | F |
| c 3 | T | F | - | T | F | - |
| a 1 | X | X |  | X |  |  |
| a 2 | X |  |  |  | X |  |
| a 3 |  | X |  | X |  |  |
| a 4 |  |  | X |  |  | X |

## Printer Troubleshooting DT

| Conditions | Printer does not print | Y | Y | Y | Y | N | N | N | N |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | A red light is flashing | Y | Y | N | N | Y | Y | N | N |
|  | Printer is unrecognized | Y | N | Y | N | Y | N | Y | N |
| Actions | Heck the power cable |  |  | x |  |  |  |  |  |
|  | Check the printer-computer cable | x |  | X |  |  |  |  |  |
|  | Ensure printer software is installed | x |  | X |  | x |  | x |  |
|  | Check/replace ink | X | X |  |  | x | x |  |  |
|  | Check for paper jam |  | X |  | X |  |  |  |  |

Let's try this for the Triangle problem

## Triangle Decision Table

| C1: $\mathrm{a}<\mathrm{b}+\mathrm{c}$ ? | F | T | T | T | T | T |  | T | T | T | T | T | T |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| C2: $b<a+c$ ? | - | F | T |  |  | T |  | T | T | T | T | T | T |
| C3: c < a+b? | - | - | F |  | T | T |  | T | T | T | T | T | T |
| C4: $\mathrm{a}=\mathrm{b}$ ? | - | - | - |  | T | T |  | T | T | F | F | F | F |
| C5: $\mathrm{a}=\mathrm{c}$ ? | - | - | - |  | T | T |  | F | F | T | T | F | F |
| C6: $\mathrm{b}=\mathrm{c}$ ? | - | - | - |  | T | F |  | T | F | T | F | T | F |
| A1: Not a Triangle | X | X | X |  |  |  |  |  |  |  |  |  |  |
| A2: Scalene |  |  |  |  |  |  |  |  |  |  |  |  | X |
| A3: Isosceles |  |  |  |  |  |  |  |  | X |  | X | X |  |
| A4: Equilateral |  |  |  |  | $x$ |  |  |  |  |  |  |  |  |
| A5: Impossible |  |  |  |  |  | X |  | X |  | X |  |  |  |

## Triangle Test Cases

| Case ID | a | b | c | Expected Output |
| :---: | :---: | :---: | :---: | :---: |
| DT1 | 4 | 1 | 2 | Not a Triangle |
| DT2 | 1 | 4 | 2 | Not a Triangle |
| DT3 | 1 | 2 | 4 | Not a Triangle |
| DT4 | 5 | 5 | 5 | Equilateral |
| DT5 | $?$ | $?$ | $?$ | Impossible |
| DT6 | $?$ | $?$ | $?$ | Impossible |
| DT7 | 2 | 2 | 3 | Isosceles |
| DT8 | $?$ | $?$ | $?$ | Impossible |
| DT9 | 2 | 3 | 2 | Isosceles |
| DT10 | 3 | 2 | 2 | Isosceles |
| DT11 | 3 | 4 | 5 | Scalene |

## NextDate Decision Table

- The NextDate problem illustrates the problem of dependencies in the input domain
- Decision tables can highlight such dependencies
- Impossible dates can be clearly marked as a separate action
- Let's try it...

## NextDate Equivalence Classes

$$
\begin{aligned}
& \text { M1 }=\{\text { month } \mid \text { month has } 30 \text { days }\} \\
& \text { M2 }=\{\text { month } \mid \text { month has } 31 \text { days }\} \\
& \text { M3 }=\{\text { month } \mid \text { month is February }\} \\
& \text { D1 }=\{\text { day } \mid 1 \leq \text { day } \leq 28\} \\
& \text { D2 }=\{\text { day } \mid \text { day }=29\} \\
& \text { D3 }=\{\text { day } \mid \text { day }=30\} \\
& \mathrm{D} 4=\{\text { day } \mid \text { day }=31\} \\
& \mathrm{Y} 1=\{\text { year } \mid \text { year }=1900\} \\
& \mathrm{Y} 2=\{\text { year } \mid \text { year is a leap year }\} \\
& \mathrm{Y} 3=\{\text { year } \mid \text { year is a common year }\}
\end{aligned}
$$

## NextDate DT (1st try - partial)

| C1: month in M1? | T | T | T | T | T | T | T | T | T | T | T | T |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| C2: month in M2? |  |  |  |  |  |  |  |  |  |  |  |  |
| C3: month in M3? |  |  |  |  |  |  |  |  |  |  |  |  |
| C4: day in D1? | T | T | T |  |  |  |  |  |  |  |  |  |
| C5: day in D2? |  |  |  | T | T | T |  |  |  |  |  |  |
| C6: day in D3? |  |  |  |  |  |  | T | T | T |  |  |  |
| C7: day in D4? |  |  |  |  |  |  |  |  |  | T | T | T |
| C8: year in Y1? | T |  |  | T |  |  | T |  |  | T |  |  |
| C9: year in Y2? |  | T |  |  | T |  |  | T |  |  | T |  |
| C10: year in Y3? |  |  | T |  |  | T |  |  | T |  |  | T |
| A1: Impossible |  |  |  |  |  |  |  |  |  | X | X | X |
| A2: Next Date | X | X | X | X | X | X | X | X | X |  |  |  |

## NextDate DT (2nd try - part 1)

| C1: month in | M1 | M1 | M1 | M1 | M2 | M2 | M2 | M2 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| C2: day in | D1 | D2 | D3 | D4 | D1 | D2 | D3 | D4 |
| C3: year in | - | - | - | - | - | - | - | - |
| A1: Impossible |  |  |  | X |  |  |  |  |
| A2: Increment day | X | X |  |  | X | X | X |  |
| A3: Reset day |  |  | X |  |  |  |  | X |
| A4: Increment month |  |  | X |  |  |  |  | $?$ |
| A5: reset month |  |  |  |  |  |  |  | $?$ |
| A6: Increment year |  |  |  |  |  |  |  | $?$ |

## NextDate DT (2nd try - part 2)

| C1: month in | M3 | M3 | M3 | M3 | M3 | M3 | M3 | M3 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| C2: day in | D1 | D1 | D1 | D2 | D2 | D2 | D3 | D3 |
| C3: year in | Y 1 | Y 2 | Y 3 | Y 1 | Y 2 | Y 3 | - | - |
| A1: Impossible |  |  |  | X |  | X | X | X |
| A2: Increment day |  | X |  |  |  |  |  |  |
| A3: Reset day | X |  | X |  | X |  |  |  |
| A4: Increment month | X |  | X |  | X |  |  |  |
| A5: reset month |  |  |  |  |  |  |  |  |
| A6: Increment year |  |  |  |  |  |  |  |  |

## New Equivalence Classes

M1 $=$ \{month | month has 30 days $\}$
M2 $=$ \{month | month has 31 days $\}$
M3 $=$ \{month | month is December $\}$
M4 $=$ \{month | month is February $\}$
D1 $=\{$ day $\mid 1 \leq$ day $\leq 27\}$
D2= \{day | day $=28\}$
D3 $=\{$ day $\mid$ day $=29\}$
D4= $\{$ day $\mid$ day $=30\}$
D5 = \{day | day=31\}
Y1 = \{year | year is a leap year\}
$\mathrm{Y} 2=\{$ year | year is a common year $\}$

## NextDate DT (3rd try - part 1)

| C1: month in | M1 | M1 | M1 | M1 | M1 | M2 | M2 | M2 | M2 | M2 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| C2: day in | D1 | D2 | D3 | D 4 | D 5 | D 1 | D 2 | D 3 | D 4 | D 5 |
| C3: year in | - | - | - | - | - | - | - | - | - | - |
| A1: Impossible |  |  |  |  | X |  |  |  |  |  |
| A2: Increment day | X | X | X |  |  | X | X | X | X |  |
| A3: Reset day |  |  |  | X |  |  |  |  |  | X |
| A4: Increment month |  |  |  | X |  |  |  |  |  | X |
| A5: reset month |  |  |  |  |  |  |  |  |  |  |
| A6: Increment year |  |  |  |  |  |  |  |  |  |  |

## NextDate DT (3rd try - part 2)

| C1: month in | M3 | M3 | M3 | M3 | M3 | M4 | M4 | M4 | M4 | M4 | M4 | M4 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| C2: day in | D1 | D2 | D3 | D4 | D5 | D1 | D2 | D2 | D3 | D3 | D4 | D5 |
| C3: year in | - | - | - | - | - | - | Y1 | Y2 | Y1 | Y2 | - | - |
| A1: Impossible |  |  |  |  |  |  |  |  |  | X | X | X |
| A2: Increment day | X | X | X | X |  | X | X |  |  |  |  |  |
| A3: Reset day |  |  |  |  | X |  |  | X | X |  |  |  |
| A4: Increment month |  |  |  |  |  |  |  | X | X |  |  |  |
| A5: reset month |  |  |  |  | X |  |  |  |  |  |  |  |
| A6: Increment year |  |  |  |  | X |  |  |  |  |  |  |  |

## Test Case Design

- To identify test cases with decision tables, we interpret conditions as inputs, and actions as outputs.
- Sometimes conditions end up referring to equivalence classes of inputs, and actions refer to major functional processing portions of the item being tested.
- The rules are then interpreted as test cases.

## Applicability

- The specification is given or can be converted to a decision table .
- The order in which the predicates are evaluated does not affect the interpretation of the rules or resulting action.
- The order of rule evaluation has no effect on resulting action .
- Once a rule is satisfied and the action selected, no other rule need be examined.
- The order of executing actions in a satisfied rule is of no consequence.

## Applicability

- The restrictions do not in reality eliminate many potential applications.
- In most applications, the order in which the predicates are evaluated is immaterial.
- Some specific ordering may be more efficient than some other but in general the ordering is not inherent in the program's logic.

## Decision Tables - Issues

- Before deriving test cases, ensure that
- The rules are complete
- Every combination of predicate truth values is explicit in the decision table
- The rules are consistent
- Every combination of predicate truth values results in only one action or set of actions

## Guidelines and Observations

- Decision Table testing is most appropriate for programs where
- There is a lot of decision making
- There are important logical relationships among input variables
- There are calculations involving subsets of input variables
- There are cause and effect relationships between input and output
- There is complex computation logic (high cyclomatic complexity)

## Guidelines and Observations

- Decision tables do not scale up very well
- May need to
- Use extended entry decision tables
- Algebraically simplify tables
- Decision tables can be iteratively refined
- The first attempt may be far from satisfactory

## Variable Negation Strategy

- An approach that can help with the scaling problems of decision table-based testing
- Applicable when the system under test can be represented as a truth table (binary input and output)
- Designed to select a small subset of the $2^{N}$ test cases

## Example truth table

| Variant Number | Normal Pressure | Call For Heat | Damper Shut | Manual Mode | Ignition Enable |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | A | B | C | D | Z |
| 0 | 0 | 0 | 0 | 0 | 0 |
| 1 | 0 | 0 | 0 | 1 | 0 |
| 2 | 0 | 0 | 1 | 0 | 0 |
| 3 | 0 | 0 | 1 | 1 | 0 |
| 4 | 0 | 1 | 0 | 0 | 0 |
| 5 | 0 | 1 | 0 | 1 | 0 |
| 6 | 0 | 1 | 1 | 0 | 0 |
| 7 | 0 | 1 | 1 | 1 | 0 |
| 8 | 1 | 0 | 0 | 0 | 0 |
| 9 | 1 | 0 | 0 | 1 | 1 |
| 10 | 1 | 0 | 1 | 0 | 0 |
| 11 | 1 | 0 | 1 | 1 | 1 |
| 12 | 1 | 1 | 0 | 0 | 1 |
| 13 | 1 | 1 | 0 | 1 | 1 |
| 14 | 1 | 1 | 1 | 0 | 0 |
| 15 | 1 | 1 | 1 | 1 | 122 |

## Deriving the Logic Function

- Review boolean algebra
- $\mathbf{A B}=A$ and $B$
- $\mathbf{A}+\mathbf{B}=A$ or $B$
- ~A $=\operatorname{not} A$
- A logic function maps $n$ boolean input variables to a boolean output variable
- A truth table is an enumeration of all possible input and output values

## Logic function

- The logic function for the example is

$$
Z=A B \sim C+A D
$$

- Several techniques to derive it
- Karnaugh maps
- Cause-effect graphs
- A compact logic function will produce more powerful test cases

## Variable Negation Strategy

- Designed to reveal faults that hide in a don' t care
- The test suite contains:
- Unique true points: A variant per term $t$, so that $t$ is True and all other terms are False
- Near False Points: A variant for each literal in a term. The variant is obtained by negating the literal and is selected only if it makes $Z=0$
- Each variant creates a test candidate set
- Unique true point candidate sets in boiler example: $\{12\}$ \{9,11,15\}

## Negation variants

| Candidate <br> set number | Term <br> negation | Variants <br> containing <br> this negation | Variants <br> containing <br> this negation <br> where $\mathrm{Z}=0$ |
| :---: | :---: | :---: | :---: |
| 2 | ABC | 14,15 | 14 |
| 3 | $\mathrm{~A} \sim \mathrm{~B} \sim \mathrm{C}$ | 8,9 | 8 |
| 4 | $\sim \mathrm{AB} \sim \mathrm{C}$ | 4,5 | 4,5 |
| 6 | $\mathrm{~A} \sim \mathrm{D}$ | $8,10,12,14$ | $8,10,14$ |
| 7 | $\sim \mathrm{AD}$ | $1,3,5,7$ | $1,3,5,7$ |

## Selecting the test cases

- At least one variant from each candidate set
- Can be done by inspection
- Random selection is also used
- Near False Points exercise combinations of don' t care values
- $6 \%$ of all possible tests are created
- $98 \%$ of simulated bugs can be found

## Test suite

- Candidate sets
